## Digital Technologies

### The Company:

#### NTE- St. Paul Park Refinery

Northern Tier Energy is the independent downstream energy company that realizes refining, retailing and pipeline operations for the PADD II region of the United States. Northern Tier Energy's refining business counts 74,000 bpd (84,500 barrels per stream day); refinery is located in St. Paul Park, Minnesota. Its location allows distributing refined products throughout the Midwestern United States. The refinery provides a broad slate of the products including gasoline, diesel, jet fuel and asphalt which are then marketed to resellers and consumers right in the PADD II region.

#### Product:

#### TRBOnet. Enterprise

#### Key Features:

- Voice Dispatch
- Voice Recording
- GPS, Geofencing
- Text

#### Installed by

#### Ancom Communications

*"We are very satisfied with TRBOnet and the support of their staff. The system is very user friendly and easy to learn. We have never had trouble trying to reach tech support, they are always willing to help..."*

**Jeffrey Sherman, safety and security / FSO**

### THE CHALLENGE

The company needs a product providing its users the ability to monitor all channels and radios, broadcast on all channels simultaneously, send prerecorded messages, record GPS and audio data. It should also be easy to cope with and be effective.

### THE SOLUTION

The provider suggests to use TRBOnet Enterprise for MOTOTRBO that will make a working process much easier and more productive by allowing to easily make one announcement over all channels instead of making this very announcement on individual channels. TRBOnet also allows you to see what channel the subscriber's radio is on, so the user can select the right channel to contact with it without surfing on multiple channels and not wasting time. TRBOnet emergency features help Northern Tier Energy to assign the tasks to their subscribers by sending the alarm/notification via TRBOnet Console, it is capable of pulling up a GPS Tracker on a screen once the emergency alarm is triggered.

*"We are very satisfied with TRBOnet and the support of its staff. The system is very user friendly and easy to learn. We have never had any troubles trying to reach tech support, they are always willing to help" - says Jeffrey Sherman, safety and security / FSO.*

### THE BENEFIT

There are 1115 subscriber radios and 19 IPSC repeaters at the site of the company. After installation of the TRBOnet most of the features may be used: radio interface, recent calls and events, playback, reports, text messaging, GPS, reminder tasks, GEOfencing and disabling radio for unauthorized radios. Simple, user friendly application solves everyday challenges in the best way possible.

### Sales and Support

For Sales and Support contact your local TRBOnet dealer or visit [www.trbonet.com](http://www.trbonet.com) for a complete list of available dealers in your area.
